Mahmoud Moustafa

Informatica IDMC delivery support for partners and data teams

Remote · Saudi and Egypt time · English and Arabic · Fixed price per work package or day rate · NDA by default
WhatsApp +966 51 026 7231 · mahmoudmoustafa.ca@gmail.com · linkedin.com/in/mahmoud-moustafa-99727122a

WHAT I DELIVER

- **Cloud Data Integration loads:** file and database sources to warehouse tables; cleansing, type conversion and standardisation; changes-only (upsert) loads; taskflows and schedules; reject handling with a reason per row; loads that are safe to rerun; source-to-target reconciliation.
- **Data quality and profiling in IDMC:** profiling reports (completeness, duplicates, invalid values), data quality rules, and rejects reports the business can act on.
- **Metadata and governance:** Metadata Command Center extraction, users, roles and access in IDMC, Secure Agent and connections, data classification support under NDMO standards (Public / Restricted / Confidential / Top Secret).
- **Data masking for handovers:** extracts with consistent fake names and hashed emails, checked for leaks before they leave.
- **English and Arabic delivery:** workshops, training, documentation, data dictionaries and governance documents in both languages.

EXPERIENCE

- **Renad Al Majd, Riyadh (Informatica partner), Data Management Specialist, Feb to Aug 2026.** National data governance program under the NDMO data management standards with government entities: IDMC profiling, data quality rules, Metadata Command Center extraction, role-based access, classification coordination; Informatica and Power BI training sessions; a data management workshop at King Saud Medical City.

RECENT IDMC BUILDS (MY OWN IDMC ENVIRONMENT)

- **CRM customer load with reconciliation:** 30 read = 23 loaded + 7 rejected with reasons, 0 errors. Caught a run that showed Success but had lost rows, by reconciling counts.
- **Changes-only load, safe to rerun:** upsert on customer ID; 7 read, 6 applied, 1 rejected; the same file run again gave the same result with no duplicates.
- **Daily load with an audit record:** 20,060 read = 19,589 loaded + 471 rejected, matching the numbers predicted before the run; one audit row per run; scheduled daily at 06:00 Riyadh time.
- **Masked vendor extract:** 20,210 customers, 0 real emails or full names in the file; found and documented a UTF-16 vs UTF-8 hashing difference so all 19,633 email hashes match on the receiving side.

CREDENTIALS

- Informatica Cloud Data Quality Professional certification (2026)
- Informatica CDQ Implementation Practitioner certification (2026)
- Bachelor of Computer Science, University of New Brunswick, Canada

HOW I WORK WITH A PARTNER

- I take a defined work package (a set of mappings, a profiling round, a migration batch, documentation) under your brand and process.
- Rules and acceptance checks are agreed up front; delivery comes with row counts and a short handover note.
- A short paid pilot task is welcome, so you can judge the quality before a bigger package.
